Euromarine Working Group for Research Infrastructures – EMGRI Workshop

Nicolas PADE - EMBRC
Dominique DURAND – JERICO-Next

From genes to ecosystems in changing oceans
www.euromarinenetwork.eu

Introduction

▸ *"MRIs provide the hardware for research, EM is the software that utilises it"*

▸ Working Group to enable direct communication with relevant marine RIs

▸ Establish lasting links between the user community of researchers and the operators of the RIs

▸ MRIs from across the marine domain

 ▸ strengthen research ties

 ▸ facilitate and enable interdisciplinary research

 ▸ Set a common, shared research agenda b/w biology, physics and chemistry

Euromarine Offer & Expectations

- **What can Euromarine offer:**
  - Monitoring research impact of RIs (scholary commons) (such as OpenAIRE Marine dashboard)
  - Horizon scanning (Euromarine Foresight WPs)
  - Validation of Services (Euromarine User Committee)
  - Support interdisciplinary research (Explicit demands for support for intersiciplinary research)
  - Improved visibility for RIs leading to improved up-take of services (dissemination)

- **What Euromarine expects from RIs:**
  - Alignment of actual research needs with RI activities and services
  - Coordination between RIs
  - Increase our membership base

How will this translate to the Euromarine members

‣ Improved understanding of European RIs

‣ Increased awareness of opportunities in the RIs (e.g. TNA calls)

‣ Influence RI development, e.g. increased multi-disciplinary research

What's next?

▸ For the WG to work we need more RIs – very difficult to find suitable dates for everyone.

▸ Propose concrete activity and benefits of WG to RIs

▸ Organise a meeting to discuss this with RIs – 11-12 June back to back with EurOcean

▸ If we have good update and attendance we will move to establish the group

▸ If we don't then we will drop the initiative.
